## CROP PRODUCTION

**This Crop Production Report is the results of the September Ag. Yield Survey. We wish to thank the approximately 230 farmers who helped to make this report possible.**

## CONTENTS

Ag Prices  
Crop Production  
Release Calendar

**Maryland:** Based on conditions as of September 1<sup>st</sup>, corn and soybean production are expected to be down

from 2000, according to the Maryland Agricultural Statistics Service. **Corn** production is forecast at 59.3 million bushels, down 5 percent from last year's production of 33.5 million bushels,

but up 77 percent from 1999's production of 33.5 million bushels. Yield is projected at 138 bushels per acre, down 17 bushels from last year's estimate of 155 bushels per acre. If realized, this will be the third highest yield on record.

**Soybean** production is forecast at 19.9 million bushels, down 10 percent from last year's production of 22.1 million bushels, but up 29 percent from 1999's production level of 15.4 million bushels. Yield is forecast at 39 bushels per acre, down 4 bushels from 2000's final estimate of 43 bushels per acre. This year's yield will be the second highest yield on record if realized.

### **United States:**

**Corn** production is forecast at 9.24 billion bushels, down less than one percent from last month and 7

percent from 2000. Based on conditions as of September 1, yields are expected to average 133.5 bushels per acre, down 0.4 bushel from August. If realized, this would be the lowest yield and production since 1997. Forecast yields are down in the northwest Corn Belt due to early-August hot, dry weather during critical reproductive and grain-filling stages. Yield prospects improved in Indiana, Nebraska, and Ohio due to timely rainfall and more seasonal temperatures in the latter part of August. In Michigan and the Northeast, extremely dry weather during the entire month greatly diminished yield prospects. Timely and plentiful rainfall in the mid-Atlantic and Southeastern States provided ideal growing conditions for corn fields and farmers are harvesting better than expected yields. Yield prospects in the southern Great Plains are mixed as yield expectations increased where rain fell, but declined where it didn't rain.

**Soybean** production is forecast at a record high 2.83 billion bushels, down 1 percent from August 1, but 2 percent above 2000. Based on September 1 conditions, yields are expected to average 38.2 bushels per acre, down 0.5 bushel from last month but 0.1 bushel above 2000. Forecast yields are down in Michigan, the northern and central Great Plains, and the Northeast due to moisture shortages. Yield prospects improved in the Ohio Valley, lower Mississippi Valley, and Texas due to above normal rainfall.

## AGRICULTURAL PRICES

Crop prices received by farmers in Maryland rose from a year ago, but were mixed from a month earlier. Corn, hay and barley prices increased, while wheat, oats and soybean remained unchanged, or were down from July. Livestock and poultry prices were generally higher than

last August, but eggs were off almost a dime a dozen. Hog prices increased \$5.00 per hundredweight from July, while egg prices climbed almost cents per dozen. Beef and broiler prices moved lower.
